

Revere Differences

Not All System Integrators Are Alike

If you've ever had a control system integration project that didn't meet your expectations, you've already learned that there are differences from one integrator to another. That low price doesn't always mean a good value. And that technology and knowledge aren't commodities. The following are some things that set us apart from the field.

CSIA Certification

This certification requires an independent audit every three years of 200 business criteria that go beyond basic quality of work. Every aspect of an integrator's business is compared to best practices for our industry.

REX (RevereEXtranet)

We give customers secure access to all project related information, including drawings, PLC programs, and O&M manuals, through a web-based repository. This supports long-term system maintainability.

Simulation Testing

Every system we produce goes through comprehensive simulation testing to assure that all functions are performing as designed. This minimizes start-up time and costs.

Size

Our 55,000 square feet of administrative and production facilities and more than 100 employees give us the capacity to handle projects large and small. And our rock-solid fiscal position reinforces our ability to support our customers completely.

Automation Alliance Group

As a founding partner in this company, we have access to its expansive resources of experience and expertise that spans six continents.
